

Pedestrian Safety

Be safe, be seen!

Pedestrian injury is the second leading cause of unintentional deaths to children ages 5-14, taking the lives of over 600 children per year.

Children under age 10 can not judge the speed and distance of approaching vehicles and should not cross the street alone.

1 in 4 child pedestrian deaths occur between 6-9pm.

Wear light or bright colored clothing when walking.

Never walk between parked cars.

Walk, don't run, across the street.

Put reflective materials on backpacks, jackets and shoes.

Cross at least 10 feet in front of a school bus.

Look left, right and left again before crossing the street.

If walking on the road, walk facing oncoming traffic.

Make sure drivers see you before you cross in front of them.

Do not play in driveways, parking lots, or near streets.

Cross at corners using traffic signals and crosswalks.
